

d7_scorecard.json

docking spec unmet:
 $0\% < 0.5$ m, all arms
(incl. $B1^{lim}$)

hero_v2_ensemble.json

anchored agent worse than
fleet mean, 11/12 seeds (v2)

d7_scorecard.json

M-FAB ANEES gate does NOT
transfer to 450 s (159-229)

d10c_guard.json

broadside guard unexercised
(ON $\equiv$ OFF, paired)

cause: approach GEOMETRY —
beacon window too short at
transit speed

remedy: decelerating approach
(v2: 2.4× better, 17% pass —
necessary, not sufficient)

cause: GAIN STARVATION —
Kalman anchoring collapses P ;
CI conservatism protects others
(m_{ξ} -trim tested:
bit-identical, falsified)

remedy class: covariance floor /
adaptive beacon R (revision)

cause: bias random-walk growth
exceeds declared Q over long
horizons; gate closed at 130 s (3.96)

remedy: horizon-scoped claims
(every ANEES carries its horizon)

cause: $\hat{\sigma}_i$ lags true broadside
(0.106 vs 0.027 @ 5000 N)

remedy: lag-aware margin
(design note, revision)
