

(a) the Blind Harbor Transit

(b) information staleness

own odometry	50 Hz
own cable direction	20 Hz
neighbor estimates	τ -stale (0.05–1.6 s)
beacon (one agent)	5 Hz, dock only

the price of staleness:

error-transport holonomy $\propto \tau^2$ [PROVEN, both plants]

closed-loop floor: measured slope ≈ 1.08 [CON] regime]
