

(a) slope across 20 random taut formations:
 1.9993 ± 0.0000 — formation-invariant

(b) remainder constant, 220 shape draws:
 $\sup = 0.0133$ — uniformly tight truncation

(c) zero-commutator pairs (sep ≥ 1 rad):
 all satisfy $C_i = C_j$ to 10^{-16} — level-set symmetry class

(d) coefficient ratio $\rightarrow 1$ as $\tau \rightarrow 0$
 (1.0000 at $\tau = 0.05$; $O(\tau^3)$ departure visible above)
