

Tier-1 dynamic floor with moving shapes (1584 runs)

Numerical evidence for the conjectured stochastic steady-state floor ([ES §10(ii)]); Theorem 7.2 is leading-order and deterministic and is tested in panel F4a. Fitted excess exponent 1.101 [1.076, 1.125]: order 2 excluded; frozen+noise-off regression reproduces the executed null (6e-30).
