

A reference frame carried around the stale round-trip loop $e^{\tau C_i} e^{\tau C_j} e^{-\tau C_i} e^{-\tau C_j}$ — the closing defect (red) is the holonomy

level-set pair $C_i = C_j$ (C15) generic pair $[C_i, C_j] \neq 0$
 gap grows $\propto \tau^2$
 closed at all τ

$\tau=0.1$
