

E2 --- step-perturbed estimates: the gauge-complement error spirals into consensus, faster on the more connected graph (LTV/frozen; Thm. 6.3)

(a) C_5 cycle ($\lambda_2=1.38$)

(b) K_5 complete ($\lambda_2=5$)

(c) decay rate grows with $\kappa\lambda_2$ (C6, slope 1.403)
