

Cross-tier overlay: three distinct objects, three measured exponents

Thm 7.2 is leading-order and deterministic — its object is the τ^2 curve (Tier-1, PROV). The closed-loop D_{ss} conjecture (order 2) is falsified at these scales per the pre-registered protocol (C7b-Drake, reported per §10 R2): with D_0 measured in situ by the straight-tow control, disagreement is first-order estimate-mismatch dominated.
